DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claims 1, 5, 6, 10, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marks et al. (US 4,551,912).

Re claims 1 and 6, Marks et al. teaches a plurality of detachable limbs that upon detachment of one or more specified limbs, the connector interface frame accommodates a particular one of a plurality of host processing system connector interfaces (abstract and FIG. 2-4). The Examiner notes that the "connector interface frame" can be read as a lead frame and the claimed "detachable limbs" can be read as leads on the lead frame, as it is well known to detach leads from a lead frame to assemble electrical components/semiconductor devices, and that such

devices are formed to accommodate the desired host processing system connector/interface. Re claims 5 and 10, perforations are shown (FIG. 3B), and perforations are well known and conventional in the art to make snapping/breaking of pieces easier/more accurate. Re claim 11, it is well known and conventional to perform computer/machine/automatic detachment (at production/processing) as opposed to by hand, which is slower and less precise/accurate.

Allowable Subject Matter

4. Claims 2, 3, 4, 7, 8, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 12-20 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art is silent to 1mm thick arms (as the chip devices themselves are usually around that size, not the arms/leads), plastic arms (leads are normally metallic/conductive), CF/PCMCIA interfaces, and media interfaces.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Harari et al. (US 6,381,662), Sun (US 6,386,920), Washino et al (US 6,628,524), Lee et al. (US 6,738,259 and 2003/0095386), Kuroda (US 6,641,413), Gann et al. (US 6,806,559), and Sankhagowit (US 4,801,561).
